## KNOWLEDGE BYTE

During the month of October, the DoD VDP saw a substantial increase of reports regarding CWE-922: Insecure storage of sensitive information. The DoD recently released changes for safeguarding sensitive unclassified information from using the designation For Official Use Only (FOUO) to Controlled Unclassified Information (CUI). This, however, does not negate dissemination restrictions for FOUO on shared computer drives or internal web sites unless they are password protected or otherwise restricted to individuals with specific responsibilities for handling. System owners are encouraged to scrub sites for any publicly available FOUO/CUI documents and remove access of individuals who violate dissemination guidance until further training can be provided. For more information on the DoD CUI Program, please see the following: <https://www.dodcui.mil/Home/Policy/> & <https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/520048p.PDF>

## RESEARCHER OF THE MONTH

The DoD VDP Researcher of the Month for October 2021 is **0x3f** with HackerOne. They submitted multiple reports this month, including a critical severity that, when creating an account, led to a discovery of documents that included PII!
