### LEADING COMMON WEAKNESS ENUMERATION'S FOR THE MONTH

CWE-200 INFORMATION DISCLOSURE	115
CWE-657 VIOLATION OF SECURE DESIGN PRINCIPLES	34
CWE-284 IMPROPER ACCESS CONTROL - GENERIC	25
CWE-79 CROSS-SITE SCRIPTING	10

### KNOWLEDGE BYTE

In March 2024, the DoD VDP received multiple critical severity submissions regarding misconfigured security permissions within several DoD Salesforce deployments. Salesforce is a cloud-based Customer Relationship Management software (CRM) used to manage and maintain client records. The platform operates under a shared responsibility model, allowing the account holder to define granular access to Salesforce objects. Researchers identified various misconfigured permission sets within the CRM deployments that could potentially lead to the disclosure of client account information and PII. It is important for all customers utilizing Salesforce to regularly perform permission audits and adhere to best security practices for data access management. Further information is available in the following resources: [https://help.salesforce.com/s/articleView?id=sf.security\\_data\\_access\\_mgmt.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.security_data_access_mgmt.htm&type=5) & <https://security.salesforce.com/blog/protecting-data-with-the-principle-of-least-privilege> & <https://www.varonis.com/blog/abusing-salesforce-communities>

### RESEARCHER OF THE MONTH

🍀 Luck of the Irish is with us in March 2024 as we crown [@initialrise](#) our Researcher of the Month! 🏆 Their findings include uncovering an indirect object reference revealing sensitive information and a clever email verification bypass. 🍀 Cheers to enhancing our security! 🍀 #ResearcherOfTheMonth #StPatricksDayCyberLuck #DODVDP
